

To the bodies and institutions whom the herein is addressed.

Holos Holding (www.holosh.org) is an international holding company with a group equity capital worth more than 17,700 billions of Euro (updated to the 8th of November 2004) and invested entirely in shares, capital stock, precious metals, plants, real estate, licences, short and medium term deposits, patents, commercial credits, banknotes, gold coins, rights and options and other activities. Such activities are inviolable.
([http://holos.wgov.org/holosbank.com/holos/ASSETS 13-2-04.htm](http://holos.wgov.org/holosbank.com/holos/ASSETS%2013-2-04.htm))

Holos Global System (www.hgsp.org) was launched in 2001; it's a program of thirty concrete initiatives to face the most felt and urgent problems of humanity in all Countries. The resources put at its carrying out disposal amount to 11,452 billions of US Dollars and enterprises' capitals for a nominal value of 12,932 billions of Euro (www.unigov.org) addressed to guarantee 517 billions Dhana, the Republic of the Earth's worldwide currency. Holos Bank (www.holosbank.com), which is not a bank institution, manages Holos Holding and Holos Global System's resources.

The Republic of the Earth (www.asmad.org) is a worldwide government directly elected by the inhabitants of the planet aged at least sixteen. People of different Countries constituted it on the 1st of January 2001. The Republic of the Earth's Constitution and its Dispositions of Performance fix the principles and ways to achieve freedom, justice, development, solidarity and peace in the entire world. The Constitution provides an International Assembly formed by one member every ten million inhabitants that will be elected for the first time from the 13th to the 19th of February 2005. The International Assembly will elect the Republic's Government.

Dhana (www.dhana.org) is the Republic of the Earth's currency, entirely guaranteed by enterprises' capitals with nominal value par to twenty-five Euros per one Dhana. Dhana is the only currency having a real value before its issue. The previewed maximum issue is 517 billions Dhana, with value par to 12,925 billions of Euro, according to the current exchange rate, equal to about 17,000 billion US Dollars. One hundred Dhana are assigned, to who takes part to the Republic of the Earth, against the only reimbursement of the emission cost. It's the Dhura body that issues Dhana currency (www.dhura.org).

Balaloka (www.balaloka.org), the Republic of the Earth's worldwide security force, has been instituted recently, its cost won't be higher than 4,250 millions of US Dollars per year, less than the one per thousand of the world's gross domestic product.

All the economic and financial analysis indicate that the US Dollar will lose the forty per cent of its value in regards of all the major currencies and of the purchase power it currently has on the international market. All the data about the PPP Dollars will have to be revised by falling. The Dollar's devaluation won't correspond to the rising of the American goods' prices, due to the fact their relation between cost and price has been puffed up. Despite all the efforts of different Countries' central banks, the Dollars devaluation will be unstoppable. The collapse of the US Dollar will cause an international monetary catastrophe with very serious effects on economy and finance. For who owns US Dollars as value reserve and as international currency reserve, the only solution is to transform banknotes and Us Dollar denominated bonds, with American goods that will be able to be sold in exchange of other currencies. Dhana, whose value will be anchored to the oils price (one Dhana per barrel), can be adopted as exchange means and as international currency reserve.

Thanks for the attention.
