## World government and currency

Soon we will have a world government and currency. Power groups (500 people) have already decided so. They control the wealth of the planet and therefore governments, banks, enterprises, the armed forces and information. They control everything.

The world government can be made up of national states in order to maintain the rule over peoples, or it can be elected directly and if all circumstances are equal by the inhabitants of the planet, to establish peace, justice and freedom for every human being. In the first case, a planetary super state that falls from above; in the second one, a really democratic system both in form and in content. There is very little time, but we can still choose between elite's world government or world government of the entire humanity, between World Empire and Republic of the Earth.

The world currency will be able to be a currency without real value, controlled by the elite to maintain the current concentration of wealth<sup>1</sup> or a currency based on work, assigned in equal parts among all the inhabitants of the planet, to start an equal redistribution of resources and wealth. In the first case, a kind of false bill without value and without maturity date; in the second one, the value of work required to produce goods and services. Also as to currency, we can still choose between currency of the empire and peoples' currency, between legal tender currency and Dhana.

The mankind and the entire planet are in a critical situation. We can refuse to admit it, but after all we know that we are running towards the verge of ruin. And we are at the last moment before the future becomes irreversible, above all because of wars, poverty, unsustainability of the planet. We are at a crossroads. We can repeat the solutions of the past that have caused this situation or adopt new solutions to build a future different from the one that we expect. The Republic of the Earth and Dhana belong to Holos Global System, a program of thirty initiatives to face the most urgent and felt problems, the last attempt to change course without violence. Together we can.

Thank you for the attention.

<sup>1</sup> Two out of a hundred of us have more than the half of world wealth, other eight out of a hundred more than a third, other forty out of a hundred less than a sixth and the remaining half less than the one percent. This means that each of the first two have on average a wealth of 2.500 time more than the one of each person of the poorer half. From this enormous disproportion a series of consequences derives, among them: one out of seven of us suffers from hunger and thirst, one out of ten dies from diseases that would be curable, more than two out of ten can't read and write.
